

Brockhausen Engineering supplies engineering, technical know-how, complete turnkey projects, machines and wear resistant cast parts for the cement and mineral processing industries, especially for grinding plants. The company takes the challenge to supply grinding systems and equipment that guarantees lowest production costs for our customers. Based on decades of experience and in co-operation with customers, universities and research institutions we continuously work on research and development projects. Main aspects of these projects are:

- development of new and improved machines like separator, cooler and drier
- integration of research partners with trial plants for the development of new mill internals, especially mill shell lining systems and mill diaphragms
- use of newest results of material science for the development of new wear resistant cast materials with improved combinations of characteristic
